Education

Toronto Metropolitan University

Toronto, ON

Bachelor of Science in Computer Science (Honours)

- **Relevant Coursework:** Computer Science I (Python), Computer Science II (Java), Computer Organization, Data Structures, Discrete Math
- **Awards and Scholarships:** Entrance Scholarship

Technical Skills

Languages: Python, Java, C++, HTML, CSS, Javascript

Frameworks & Technologies: React, Git/Github

Platforms and Tools: AutoCAD, Autodesk Inventor, Adobe Photoshop, Figma

Concepts: Object Orientated Programming, Data structures and Algorithms

Experience

Freelance Web Developer

Mar 2025 – April 2025

Self Employed

- Developing a modern barbershop website using **React**, **JavaScript**, and **CSS** with appointment booking functionality and service galleries

Outlier AI

Mar 2024 – Present

Freelance AI Coding Trainer

- Developed and implemented **20+** coding exercises in **Python**, **Java**, and **JavaScript** to train generative AI models
- Diagnosed and corrected **30+** logical errors in AI-generated code, enhancing models' understanding of **algorithms** and **data structures**
- Created comprehensive technical documentation and style guides that raised AI response quality scores
- Designed evaluation frameworks to systematically assess code quality, focusing on efficiency, readability, and best practices

Projects

SpotSense – AI-Powered Skin Analyzer | *Python, TensorFlow, Flask, SQL, Google Maps/Cohere APIs, JavaScript, HTML/CSS*

- Developed a **Flask-based web app** using **TensorFlow/Keras** to classify skin lesions as malignant/benign with **85%+ accuracy**, improving early detection of dermatological issues
- Engineered a **secure user workflow** with image uploads/webcam capture, **SQL database storage**, and **Google OAuth** for encrypted logins, ensuring data privacy
- Integrated **Google Maps API** for hospital localization and a **Cohere-powered chatbot** to provide real-time answers about skin conditions
- Optimized frontend (**HTML/CSS/Jinja**) and backend (**Python/JavaScript**) for performance, reducing analysis latency by **30%**

Pomodoro Study Timer | *Python*

- Developed a Pomodoro Timer application using **Python** and **tkinter** that helps users enhance productivity through timed work and break intervals
- Integrated configurable timer intervals for work sessions (25 minutes), short breaks (5 minutes), and long breaks (15 minutes) following the Pomodoro technique
- Utilized Python's messagebox module for notifications, alerting users at the end of each session or break interval

Expense Tracker Application | *Java*

- Developed an Expense Tracker application to help users manage their expenses efficiently
- Key features include adding, removing, editing expenses, viewing expense lists, and generating monthly summaries
- Demonstrated the ability to design, implement, and enhance a user-focused application
- Showcased proficiency in **Java** and **object oriented programming** concepts through real-world application development
